EXCEPTIONAL SHOWING FOUND ON BARBER BILL ON NINE MILE

Has All Appearances of Being An Ideal "Poor Man's" Proposition
--Successful Season on Silver Cup Property--Tram
Line Now Working on the Silver Bell

During the past season there has been more development going on in the silver-lead section of the district than at any time since mineral was first discovered on Nine Mile mountain over six years ago.

Before the season is over there will have been some ten carloads sent from Nine Mile mountain to the Trail smelter, and it is all ore that will run around the hundred dollar mark, gross value.

The first of the week D. McLeod, L. W. Patmore and the editor of the Herald visited all the properties in the Silver Cup and Sunrise basins, at least all that have been under development this season. These included the Silver Cup, the Silver Bell, the Barber Bill, the Sunrise and Joe. Miller's claims. All these groups are connected by trails, built mostly by the owners, and the going is very easy.

The visitors were accompanied by Geo. Clothier and W. S. Harris. They arrived at the Silver Cup soon after noon and well were fed and refreshed before starting up the hill to the tunnels where the boys are taking out ore and shoving ahead the development.

The Silver Cup has been opened up by a series of tunnels, four of which are now in ore, three on the Cup and one on the Dutchess claims. The other two are headed for the Cup vein but are not completed.

Messrs. Geo. and Roy Clothier have a lease on the property and thus far have devoted themselves to the Nos. 2 and 3 tunnels and to surface work. They will spend the rest of the season in prosecuting development, principally in No. 3 tunnel and getting a good bunch of ore in sight for next season. The boys have come to the conclusion that winter work is out of the question without a long tunnel from the timber or a long snow shed. The expense in either case is not yet justified.

Four carloads have been the output and the class of ore has been profitable to handle. They have had several shoots of ore that were exceptionally rich, and on Tuesday they ran into another shoot on the Dutchess that will complete the last car and increase the smelter returns materially.

Geo. Stewart's property, the Silver Bell adjoins the Cup and although the ore to be shipped this season will be only a part of a carload, the ore is very high

grade. The property is also in good shape for operating next year. During the past season Stewart devoted most of his time to the erection of a tram from his cabin in the timber to the mouth of the tunnel, a distance of 1400 feet. The tram is working in first class shape and Geo. Stewart deserves a good deal of credit for undertaking such a task. Next spring he can start right in on the ore.

The sensation of the hill this year is the discovery on the Barber Bill, which adjoins the Bell. The Barber and Barber Bill, two claims, are under a two year lease and a \$5,000 bond to Fred Brewer, Jock Johnson and Ernest Lofquist. It was only a few weeks ago that a couple of the boys were prospecting on the ground and ran across a stringer a sample from which was assayed and showed good silver and lead values. The boys then set to work to get control of the property and succeeded in securing two claims on very favorable terms.

Further prospecting and surface stripping developed a vein from four to six feet wide with high grade clean ore right across. For some little time now they have been prospecting the vein and taking out ore.

The vein at present is lying pretty flat, but it is expected to straighten up a few feet in. As soon as the dip is discovered the boys will start a cross cut tunnel a short distance down the hill and get under ground before the snow comes. They have an ideal tunnel site in the timber which will also mean a short tunnel. In the meantime the boys are getting a great bunch of ore off the surface. They have about a hundred feet stripped.

This week the pack train went up to start bringing down the ore. There will be a full car.

The Barber Bill group is located in an exceptionally favorable position for working and for connection with the Nine Mile wagon road. The vein outcrops in the timber sheltered from storms and slides of all kinds. To examine now the most pessimistic would say that it has the best surface showing on the hill and that it is one of the very few silver-lead properties that look like a poor man's proposition.

It is the wish of everyone in the district that the boys make a good big stake. A sample of the ore can be seen in the Herald office.

Continued next week

LIBERAL MEETING TOMORROW NIGHT

An important meeting of the Liberal Association of New Hazelton will be held in the town hall on Friday evening, Sept. 10, at 8 o'clock sharp. All Liberals are requested to be present.

Telkwa Fair Next Week

There will be a good representation from this district to the big fair at Telkwa next Friday and Saturday. Some will go up on Thursday's train and others will go in the autos on Friday.

Rev. D. R. McLean Inducted

On Tuesday of last week Rev. D. R. McLean was inducted as minister of St. Andrews Presbyterian church at Quesnel. Last week the regular fall meeting of the Cariboo Presbytery was held in Quesnel. The moderator, Rev. A. C. Justice presided.

Russians Still in Galicia

Vienna, Sept. 8—It is admitted that the Russians have checked the advance of the Austrians in Galicia.

Another Air Raid

London, Sept. 8—German aircraft made another raid on the east coast of England last Tuesday night and did some damage.

Invasion is Collapsing

Petrograd, Sept. 8—The invasion is collapsing. The Germans have been checked at every point and munitions are arriving faster than ever before.

Italians for Gallipoli

Rome, Sept. 8—Italian soldiers filling one hundred and seventeen transports, and conveyed by sixteen warships, embarked at Taranto for the Dardanelles.

Turkish Transport Sunk

London, Sept. 8—An Athens despatch to the Exchange Telegraph says that a British submarine operating in the Sea of Marmora has sunk a Turkish transport which was carrying 28-centimeters from Constantinople to Gallipoli.

An Austrian Plot Discovered

New York, Sept. 8—An incriminating letter which was found among the possessions of the Austrian ambassador exposes a plot to tie up the munition plants in creating a sensation throughout the United States.

Heavy Fighting at Gallipoli

Athens, Sept. 8—Heavy fighting on the Gallipoli peninsula is still in progress and the condition of the Turks is critical. At Constantinople the city is overflowing with wounded from the Dardanelles.

MANY IMPROVEMENTS MAKING TRAIL SMELTER MOST MODERN

New Sampling Mill and Copper Converters Installed--Thousands of Men Employed at Smelter and In Company's Mines
--Splendid Gift to Patriotic Fund

For some time past extensive improvements and additions have been under way at the Trail smelter. These are of much interest to the mining men of this district, as it is to Trail that all the silver and lead ores are being shipped for treatment.

The Trail smelter, owned and operated by the Consolidated Mining and Smelting Co., is now one of the most modern plants in the Dominion, if not on the Continent. It has grown very rapidly and the management has always been quick to install new devices for the more rapid and more economical handling of the ores. Recently a new sampling mill and a new lead furnace have been installed; also copper converters—quite a new thing for Trail. The converters mean that copper matts running about 75 per cent pure will be shipped in future to the refinery instead of matts running about 45 per cent pure. These additions, together with the zinc reduction works now under construction, place

the Trail smelter well towards the top in the smelting business.

Between the smelter and the various mines owned and operated by the company, the Consolidated Mining and Smelting Co. employs some two thousand men at Trail and at Rossland mines. All the properties are working to capacity, or nearly so, and thus business is very good in all lines in that district.

Recently the employees of the company, from the general manager down, agreed to contribute one day's pay per month to the patriotic fund, these payments to be made so long as the war lasts. It means a monthly contribution of practically five thousand dollars. The employees of the company are a very patriotic bunch and they are also interested in the war from the fact that a great many of their associates are already serving the country. Those who are not going to the front will assist those dependent upon the boys who have gone.

FARMING HINTS

It is reported by the Banker-Farmer that the First National Bank of Thief River Falls, Minnesota, will loan at least \$15,000 to farmers for the construction of silos, and the loans will be made without interest. It is stated that if the farmers of that section prove sufficiently wide-awake and alert to the opportunity the bank will not be averse to doubling the proposition.

Vast numbers of flies breed wherever cattle and horses are confined. Stockyards and stables, in spite of precautions, and even when extra care is taken, are generally infested with the pest. Abattoirs, being usually close to the stockyards, would be full of flies during the summer months unless screens and other methods were in use to limit the number. At one of the abattoirs under government inspection the inspector in charge kept a record of the flies caught in the fly traps in use there. These fly traps are large cylindrical affairs made of wire gauze, baited with stale beer or other delicacy, and are placed outside the doors as well as inside the building. During the months of May, June, July and August, 1914, 783 quarts of flies were captured, weighing 1,081 lbs. As there were found to be 9,600 flies

to one quart, the total number of flies caught was 7,545,600.

Cultivation, or the stirring, of the soil has two functions: it kills weeds, and it helps to hold moisture in the soil. Weeds should never be allowed to get a start. Natural moisture is better than water put on with a hose or from a watering pot. Any loose material lying on the surface of the soil will prevent moisture from evaporating in the heat of the summer sun. You can make the top layer of soil act as the protective covering by keeping it loose and crumbly. After each rain, as soon as the soil can be stirred, take a rake and break up the surface soil. This will soon dry out, and, to one who does not know, will seem too dry. But if this layer of an inch or so of dry soil is brushed off, firm, moist soil will be found underneath, and it will remain moist even during a long drought. Whether there are weeds or not, cultivate whenever the surface becomes packed, in order that at all times the surface soil, or "soil mulch," as it is called, may protect the under soil and save moisture.

During the six months ending June 30th, 1915, Great Britain imported 6,393,100 cwt. of wheat from Canada valued at \$4,377,486 as against 9,449,229 cwt. valued at \$3,793,624 in the corresponding period of 1914.

SAVE the ZINC

By P. J. Higgins in the World

The establishment of a custom mill in this province would give a great stimulus to the mining industry." This statement was made by Mr. Patrick J. Higgins, well known mining man of the Rossland and New Hazelton districts. "A large majority of the lead ores of this province contain about equal percentages of lead and zinc. This is especially true of the New Hazelton district ore, where the average is 30 per cent lead, about the same of zinc, and with about two ounces of silver for each percentage or unit of lead.

"This lead-zinc ore must first be sent to a mill or else one of the properties will be lost in the smelting. Not only will one of the properties be lost, but the shipper will be forced to pay a penalty to the smelter for the trouble caused by the presence of the foreign mineral.

"The average lead ore of the New Hazelton district runs thirty per cent each of lead and zinc, and the loss suffered by the shipper when the ore is smelted is about \$65 a ton. He loses the value of the zinc, he is penalized for the presence of the zinc in the ore, and he pays a high rate for the smelting because the lead percentage is not high. All this loss would be obviated if the ore were first sent to a custom mill. There the individual properties would be extracted, and individually they could be smelted at a very low cost.

"For instance, the smelter charges about \$5.50 or \$6.00 for treating 60 per cent lead ore, and this rate is even lower where the percentage of lead is higher. For 40 per cent ore they charge \$8.00 a ton, and where ore runs less than 40 per cent pure the rate goes up to \$12. If 30 per cent lead ore which contains also about an equal percentage of zinc is first milled, the lead product is rendered very pure and will be treated very cheaply by the smelter. In addition to this saving the zinc extract can be treated and the zinc values retained instead of being totally lost as they are if the original ore is sent intact to the lead smelter for refining.

"At present the smelter charge

es \$12 for extracting lead values from one ton of ore running 30 per cent each of lead and zinc. They penalize the shipper 50c for each unit of zinc if there are more than eight units to the ton. Therefore on this ore the shipper would be penalized \$11 for the 22 units. In addition the zinc values would be totally lost, which on the ton would mean a loss of about \$48 according to the government quotation of eight cents a pound for zinc.

"Now if that ton of ore had been milled first the smelting charge would have been reduced from \$12 to about \$6. This saving, together with the saving of the penalty charge and the value of the zinc retained, would bring the cost down \$65. Nor would that be the only added income from the ore, for today where the zinc is a total loss you must figure the cost of mining, thirty per cent of which is to no avail. There is the cost of packing the ore to the water or rail, and also the freight charge of \$12 a ton from New Hazelton to the Trail smelter. All of these costs are 30 per cent dead losses.

"The government could erect a custom mill at Trail, or some place in the province which could be easily reached, for about \$50,000. It would be a very good investment for the government as the mining men of the province would be willing to pay a high rate for their work until the mill had been paid for. The amount of work which would flow to the mill would insure a good return on the investment. Furthermore, hundreds of mines would be put to work which are now idle. The value of the ores treated would mean a great added income to British Columbia, and thousands of men would be given employment."

TOURISTS PLEASSED IN NEW HAZELTON

Spent Several Days Sight-seeing and Express Delight With District's Great Natural Beauties

G. H. and Mrs. Cone, Albany, N.Y., who spent several days in New Hazelton last week, spoke very highly of this town and the district as a tourist resort. The visitors were on their way home from an extended trip through the Western States and along the Pacific coast, stopping off here for a few days' fishing. They had some good sport with the rod, and were greatly interested in watching the salmon climbing over the rocks in the Hagwilget canyon. They succeeded in getting a couple of good snap shots of the fish leaping over rocks. Speaking of the scenery, the visitors stated that they had seen no superior in all their travels.

(First Publication July 30)

SYNOPSIS OF COAL MINING REGULATIONS.

COAL mining rights of the Dominion, in Manitoba, Saskatchewan and Alberta, the Yukon Territory, the North-west Territories and in a portion of the Province of British Columbia, may be leased for a term of twenty-one years at an annual rental of \$1 an acre. Not more than 2,560 acres will be leased to one applicant.

Application for a lease must be made by the applicant in person to the Agent or Sub-Agent of the district in which the rights applied for are situated.

In surveyed territory the land must be described by sections, or legal subdivisions of sections, and in unsurveyed territory the tract applied for shall be staked out by the applicant himself.

Each application must be accompanied by a fee of \$5 which will be refunded if the rights applied for are not available, but not otherwise. A royalty shall be paid on the merchantable output of the mine at the rate of five cents per ton.

The person operating the mine shall furnish the Agent with sworn returns accounting for the full quantity of merchantable coal mined and pay the royalty thereon. If the coal mining rights are not being operated, such returns should be furnished at least once a year.

The lease will include the coal mining rights only, but the lessee may be permitted to purchase whatever available surface rights may be considered necessary for the working of the mine at the rate of \$10.00 an acre.

For full information application should be made to the Secretary of the Department of the Interior, Ottawa, or to any Agent or Sub-Agent of Dominion Lands.

W. W. CORY

Deputy Minister of the Interior.

N. B.—Unauthorized publication of this advertisement will not be paid for.

The Optimism of Advertising

A word that is frequently misused is "optimism." A man engaged in any business whatsoever who looks for success without exercising his faculties to achieve that end, is not an optimist, but a fool

Two things make advertising almost a synonym for optimism. One is that the advertiser who would be successful must be an optimist. The other is that when an advertiser loses his optimism he generally cancels his advertising.

"Business is rotten," exclaims the manufacturer, and forthwith orders all his advertising stopped, little realizing that his own action is one of the principal causes that makes business rotten.

Cancelling advertising is so easy that it is nearly always the first step toward retrenchment. The matter is seldom decided on its merits. It is impulse. Advertising must be an expense, the advertiser reasons. Therefore to cut it off effects a saving.

The stoppage of advertising in times of stress and change has two bad effects upon the business involved. It turns off immediately a method of securing new business and holding old business. In addition to that, it advertises the pessimistic views of the advertiser, and therefore spreads his own lack of

faith in himself, his country, his goods, and the future to other business men who are perhaps on the verge of doing the same thing.

Without in any way minimizing the crisis which the world is now facing, without ignoring the fact that a long, expensive war in Europe will result in a great deterioration of values and a tremendous adjustment of finance and commerce when it is over, there is nevertheless sufficient ground for believing that this country is going on, that the manufacture and consumption of goods will continue, and that the manufacturers who are enterprising, far-sighted and alert enough to take advantage of existing and new markets and to push their business as they would in ordinary times, are going to benefit by their actions.

The point is that the war will either end everything in the world or it will not. If it does not, business, among other things, must go on. In our own country it must go on now. It cannot wait until the war is over.

The real Optimist is the man who hopefully faces conditions as they are

EXPORT BUTTER TO NEW ZEALAND

Canadian Creameries Find an Outlet—Formerly Imported Millions of Pounds

There has been considerable comment in recent years respecting the importation of butter from New Zealand and Australia into Canada. It would appear, however, that the tables are now being turned, as the steamer Makura, which sailed for New Zealand and Australia on the 7th inst., carried approximately 4,000 boxes of butter from creameries in the prairie provinces, and that orders have been received by Vancouver merchants for a further shipment of 6,000 boxes by the next steamer. It seems quite likely that in the near future the output of butter from creameries in Alberta, Saskatchewan and Manitoba will be sufficient to

supply all western demands and provide a substantial surplus for export. The maximum importation of butter (7,989,269 lbs.) was during the fiscal year 1912-13.
